Git Escape Room: The Campus Café Back Office

CM-501 Frontend Web Development · Session 3 · warm-up (12 min, teams of 2–3)

Team: _____ Edgars _____ **Escaped at (time):** _____

It is 23:47. The Campus Café is closed and the door has locked behind you. The only thing still running is the café's Git repository. The developer hid the **four letters of the exit code** in the **Git history**.

Get into the room (1 min)

```
git clone https://github.com/rathmayers/git-escape-room.git
cd git-escape-room
```

No network? Your instructor has a USB stick / course-page download with `make-escape-room.sh`. Run `bash make-escape-room.sh` (Windows: in **Git Bash**), then `cd git-escape-room`.

Rules

- Only Git commands (and `cat`/`type` to read files). Do **not** edit files.
- Write down the **command** that opened each lock: no command, no point.
- Hints cost **1 point each** (ask the instructor for a hint card).
- The four letters form a word. Turn it into an **HTML tag**, write it on a sticky note and bring it to the front.

Lock	Clue	Command(s) you used	Letter
1	Ada worked the night shift. Her commit message holds letter 1.		
2	Someone deleted `vault.txt`. It contained letter 2.		
3	There is a **basement** in this repository. A note down there holds letter 3.		
4	On opening day the owner put a **tag** on the history. Its message holds letter 4.		
Bonus	The latte got more expensive. **Who** changed the price, from **what** to **what**?		

Exit code (HTML tag): < _____ >

Scoring: 2 points per lock · bonus 2 points · first team out +3 · −1 per hint.
